1)

Drawbacks of Saarang 2015 website:

- If you make the window size small enough, two buttons appear at the top-right and bottom-right which have no use
- The cursor changes to pointer around the search box, which is unnecessary
- If you zoom out the map in MILAN page it does not zoom out with India as center
- Website does not have link to Schedule unlike Shaastra
- When you hover over any one of the events in the events page, the fadein and fadeout does not stop
- If you place the cursor on the blinking blue box at the top-right for enough time another box appears below it, which is unnecessary
- The links given in the about page for any events are not so promptly visible ,i.e their color is not in contrast to the background, for that matter it is true for any link

Drawbacks of Saarang 2015 app:

- There is no homepage for the app, as in if you go to some other page like “My Schedule” or “Map” or some other and press back button, you will exit the app altogether. This is anyways not true for “Settings” page
- I don't know if only I faced this problem or not, but I got the remainder for proshows, 1hour after the event has happened

2)

Improvements for Saarang 2015 website:

- We can debug all the drawbacks along with the following adjustments
- Shaastra website has something like dice to play with, on similar lines I thought:
Let's put the logo at the center in homepage and when you hover over one particular ring, the ring becomes bigger and fades a bit and there will be a sound(like a keynote). It will be nice to play with
- All the events page have same background, it will be nice if we change the background to something related to the event, like it is for the proshows
- In the EUNOIA page it would have been better if the information pops out even if we click on the text rather than clicking on the small tick mark
- The icon for popular night does not seem relevant, it should be changed

Improvements for Saarang 2015 app:

- We can debug all the drawbacks along with the following adjustments
- The explore page can be made to scroll not only in the vertical direction but also in the horizontal direction, as in themes in the vertical direction and all events within in a theme in the horizontal direction
- We can add an animation on the explore page
- We can put a 3d-effect for the icons, if it scrolled beyond limits
